Glycerophospholipid metabolism Glycosphingolipid biosynthesis – ganglio series Thiamine metabolism alpha–Linolenic acid metabolism Arginine biosynthesis Mucin type O–glycan biosynthesis Mannose type O–glycan biosynthesis Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Glycosphingolipid biosynthesis – ganglio series Thiamine metabolism alpha–Linolenic acid metabolism Arginine biosynthesis Mucin type O–glycan biosynthesis Mannose type O–glycan biosynthesis Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Thiamine metabolism alpha–Linolenic acid metabolism Arginine biosynthesis Mucin type O–glycan biosynthesis Mannose type O–glycan biosynthesis Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Arginine biosynthesis Mucin type O-glycan biosynthesis Mannose type O-glycan biosynthesis Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Folate biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Mucin type O-glycan biosynthesis Mannose type O-glycan biosynthesis Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	alpha-Linolenic acid metabolism
Mannose type O-glycan biosynthesis Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Glycosphingolipid biosynthesis – lacto and neolacto series Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	7. • 7
Starch and sucrose metabolism Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	· · · · · · · · · · · · · · · · · · ·
Synthesis and degradation of ketone bodies Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Oynthoolo and dogradation of totorio bodico
Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	
Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism
Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism
Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism
Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate
Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism
Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism
Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation
Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism
Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism
Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis
Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism
Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis
Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate
Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism
Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism
Glycine, serine and threonine metabolism Linoleic acid metabolism	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism
	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism
One carbon pool by folate	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis
	Alanine, aspartate and glutamate metabolism Porphyrin and chlorophyll metabolism Retinol metabolism Nicotinate and nicotinamide metabolism Glycosaminoglycan biosynthesis – keratan sulfate Tryptophan metabolism Histidine metabolism Valine, leucine and isoleucine degradation Pyrimidine metabolism Nitrogen metabolism Fatty acid biosynthesis Folate biosynthesis Tyrosine metabolism Pantothenate and CoA biosynthesis Glycosaminoglycan biosynthesis – chondroitin sulfate / dermatan sulfate Taurine and hypotaurine metabolism Phenylalanine metabolism Arginine and proline metabolism Cysteine and methionine metabolism Steroid biosynthesis Glycine, serine and threonine metabolism Linoleic acid metabolism
